Dr. Ellen Stang

Founder & CEO
ProgenyHealth®

Dr. Ellen Stang is a board-certified pediatrician, a member of the American Academy of Pediatrics, and a recognized leader in improving care management and health outcomes for premature and medically complex newborns.

Dr. Stang founded ProgenyHealth in 2003 to improve outcomes for premature and medically complex infants, enhance the patient and provider experience, and reduce overall costs of care. She took an entrepreneurial approach by building the business from the ground up in an industry that has been slow to embrace change. After starting alone in her basement, ProgenyHealth is now the only national company dedicated exclusively to Maternity & NICU Care Management and employs over 200 people.

ProgenyHealth serves women and infants through the milestones of maternal health from conception and pregnancy to postpartum and parenting, with a special expertise in managing premature and complex births and resulting NICU admissions.

The company’s data-driven Maternity Care Management program focuses on delivering healthier, full-term infants and lowering the overall cost of care. The NICU Care Management program optimizes the length of stay and appropriate NICU days, reduces readmissions and ER visits, validates claims, and solves SDoH issues for young families.

This integrated approach has proven effective in improving infant quality outcomes and helping payers save millions of dollars in claims costs.

Dr. Stang actively shares her knowledge with the healthcare and business communities. To request interviews, quotes, and subject matter expertise please contact:
